Claim 3; Page 69; 154pp; English.

Novel high molecular weight Dermatophagoides nucleic acid polypeptides used to modify an animals' hypersensitivy to mite allergens.

WPI; 2000-052700/04.

Mccall CA,

Hunter SW,

Sequences AAY52510-Y52522 represent proteolytic fragments of Dermatophagoides farinae high molecular weight mite allergen protein (HWM nmap) composition. The HMM-map composition was isolated from a D. farinae homogenate by gel filtration, with each fraction being analysed for the presence of proteins that bound to IgE present in mite-allergic dog antisera. The HMM-map composition comprises mapA (a 109 kD protein) and mapB (98 kD). Mite allergenic proteins and peptides, and nucleic acids encoding them, may be used in therapeutic compositions to modify an animal's hypersensitivity reaction to mite allergens. Animals that may be treated include mammals and birds, especially felines, canines, equines,

                                                                          The invention relates to an isolated mite allergenic protein of Dermatophagoides, designated Der HMW-map protein, and its related nucleic acid. The Der HMW-map protein is useful for eliciting an immune response against Der HMW-map protein. The protein or a reagent comprising a non-proteinaceous epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the detection of anti-Der HMW-map antibodies in animal fluids, and inhibition of immunoglobulin (Ig)E or Der HMW-map protein activity associated with a disease. Antibodies that bind to Der HMW-map are useful for inhibiting binding of proteins to IgE, to prevent immunocomplex formation, thus
                                                                                                                                                                                                                                                                                                                                                                                                 WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            humans, other pets, and work or domestic animals. The proteins or fragments may also be used to diagnose allergies via a skin test. The proteins and peptides can also be used to raise antibodies, which have a variety of potential uses. For example, they can be used as vaccines to passively immunise animals against dust mite hypersensitivity, as positive controls in test kits and as tools to recover desired dust mite allergens from a mixture of proteins
                              reducing hypersensitivity responses to mite allergens, and as vacciagainst mite allergen hypersensitivity. Sequences AAU96314-AAU96342 represent Der HMW-map polypeptides of the invention

                                              mapB (98 kD). Mite allergenic proteins and peptides, and nucleic acids encoding them, may be used in therapeutic compositions to modify an animal's hypersensitivity reaction to mite allergens. Animals that may be treated include mammals and birds, especially felines, canines, equines, humans, other pets, and work or domestic animals. The proteins or fragments may also be used to diagnose allergies via a skin test. The proteins and peptides can also be used to raise antibodies, which have a variety of potential uses. For example, they can be used a vaccines to passively immunise animals against dust mite hypersensitivity, as positive controls in test kits and as tools to recover desired dust mite allergens from a mixture of proteins
                                                                                                                                                                                                                                                                                                                                                                  Sequences AAY52510-Y52522 represent proteolytic fragments of Dermatophagoides farinae high molecular weight mite allergen protein -map) composition. The HMW-map composition was isolated from a D. fa homogenate by gel filtration, with each fraction being analysed for presence of proteins that bound to IgE present in mite-allergic dog antisera. The HMW-map composition comprises mapA (a 109 kD protein)

                                                                                                                                                                                                                             Ś
                                                                                                                                                                                                                                                                                                                                                                The invention relates to an isolated mite allergenic protein of Dermatophagoides, designated Der HMW-map protein, and its related nucleic acid. The Der HMW-map protein is useful for ellciting an immune response against Der HMW-map protein. The protein or a reagent comprising a non-protein acceptable to or having an allergic response to a mite. A protein susceptible to or having an allergic response to a mite. A protein can be used in the callergic response to a mite. The DNA and protein can be used in the callergic response to a mite. The DNA and protein can be used in the callergic response to a mite. The DNA and protein can be used in the callergic response to a mite. The DNA and protein can be used in the callergic response to a mite. The DNA and protein can be used in the callergic response to a mite of the invention of immunoglobulin (19% or Der HMW-map protein activity associated with a callergen. Antibodies that bind to Der HMW-map are useful for inhibiting binding of proteins to 19%, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences ABU96314-ABU96342 or represent Der HMW-map polypeptides of the invention
                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                       allergens. Animals that may be treated include mammals and birds, especially felines, canines, equines, humans, other pets, and work or domestic animals. The proteins or fragments may also be used to diagnose allergies via a skin test. The proteins and peptides can also be used to raise antibodies, which have a variety of potential uses. For example, they can be used as vaccines to passively immunise animals against dust mite hypersensitivity, as positive controls in test kits and as tools to recover desired dust mite allergens from a mixture of proteins
                                                                                                                                                                                                                                                                                                                       This sequence represents Dermatophagoides farinae mite allergen protein (map) PDerf98-536, the mature form of PDerf98-555 (AAY52523). PDerf98-536 has a molecular weight of 98 kD, comprising 536 amino acids, and is a component of the Dermatophagoides farinae high molecular weight mite allergen protein (HWM-map) composition. The HMW-map composition was isolated from a D. farinae homogenate by gel filtration, with each fraction being analysed for the presence of proteins that bound to Ig3 present in mite-allergic dog antisera. Mite allergenic proteins and peptides, and nucleic acids encoding them, may be used in therapeutic compositions to modify an animal's hypersensitivity reaction to mite-allergic dog antisera.
                                                                                                                                           Sequence 536
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Mite allergen protein; map; high molecular weight; HMW-map; allergy; house dust mite; IgE; immunoglobulin E; allergen; mapA; mapB; hypersensitivity reaction; therapy; treatment; diagnosis; human; feline;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        allergic response to a mite. The DNA and protein can be used in the detection of anti-Der HMW-map antibodies in animal fluids, and inhibition of immunoglobulin (Ig)8 or Der HMW-map protein activity associated with a disease. Antibodies that bind to Der HMW-map are useful for inhibiting binding of proteins to IgE, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences AAU96314-AAU96342 represent Der HMW-map polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Dermatophagoides, designated Der HMW-map protein, and its related nucleic acid. The Der HMW-map protein is useful for eliciting an immune response against Der HMW-map protein. The protein or a reagent comprising a non-proteinaceous epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to an allergic response to a mite who may an allergic response to a mite.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New

The HMW-map composition was isolated from a D. farinae composition. The HMW-map composition was isolated from a D. farinae composition and protein and protein analysed for the presence of proteins that bound to 1gE present in mite-allergic dog antisera. Mite allergenic proteins and peptides, and nucleic acids encoding them, may be used in therapeutic compositions to modify an carimal's hypersensitivity reaction to mite allergens. Animals that may be treated include mammals and birds, especially felines, canines, equines, humans, other pets, and work or domestic animals. The proteins or fragments may also be used to diagnose allergies via a skin test. The proteins and peptides can also be used to raise antibodies, which have a variety of potential uses. For example, they can be used as vaccines to passively immunise animals against dust mite hypersensitivity, as

                                                                                                                                                                                                                                                                                                                     15-JUL-2002 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      proteinaceous epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the detection of anti-Der HMW-map antibodies in animal fluids, and inhibition of immunoglobulin (Ig)E or Der HMW-map protein activity associated with a disease. Antibodies that bind to Der HMW-map receive are useful for inhibiting binding of proteins to IgE, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (AAYSSSSS). Nucleic acid molecules encoding Pherp98-490 were isolated from a D. pteronyssius cDNA library by hybridisation with a probe encoding the D. farinae high molecular weight map (HMW-map) composition. Mite allergenic proteins and peptides, and nucleic acids encoding them, may be used in therapeutic compositions to modify an animal's them, compositivity reaction to mite allergens. Animals that may be treated include mammals and birds, especially felines, canines, equines, humans, cother pets, and work or domestic animals. The proteins or fragments may also be used to diagnose allergies via a skin test. The proteins and peptides can also be used to raise antibodies, which have a variety of potential uses. For example, they can be used as vaccines to passively immunise animals against dust mite hypersensitivity, as positive controls in test kits and as tools to recover desired dust mite allergens from a mixture of proteins. (Updated on 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                            mite allergenic protein; immunocomplex formation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1:
```

The invention relates to an isolated mite allergenic protein of Dermatophagoides, designated Der HMW-map protein, and its related nucleic

This sequence protein (map)

represents Dermatophagoides pteronyssius PDerp98-509. PDerp98-509 has a molecular

mite allergen weight of 98 kD

The protein or a reagent comprising a non-
proteinaceous epitope is useful for identifying an animal (e.g., dog,
cat) susceptible to or having an allergic response to a mite. A
therapeutic composition is useful for desensitising a host animal to an
allergic response to a mite. The DNA and protein can be used in the
detection of anti-Der HMW-map antibodies in animal fluids, and inhibition
of immunoglobulin (Ig)E or Der HMW-map protein activity associated with a
disease. Antibodies that bind to Der HMW-map are useful for inhibiting
binding of proteins to IgE, to prevent immunocomplex formation, thus
reducing hypersensitivity responses to mite allerges, and as vaccines
against mite allergen hypersensitivity. Sequences AAU96314-AAU96342
represent Der HMW-map polypeptides of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cc comprising 509 amino acids, and has a high degree of homology with the D. Cc farinae 98 kD allergen, mapB (AAY52523). Nucleic acid molecules encoding CPDerp98-509 were isolated from a D. pteronyssius cDNA library by CC hybridisation with a probe encoding the D. farinae high molecular weight map (HMW-map) composition. Mite allergenic proteins and peptides, and composition acids encoding them, may be used in the rapeutic compositions to modify an animal's hypersensitivity reaction to mite allergens. Animals compositions to modify an animal's hypersensitivity reaction to mite allergens. Animals cc that may be treated include mammals and birds, especially felines, compositions, humans, other pets, and work or domestic animals. The proteins or fragments may also be used to diagnose allergies via a skin test. The proteins and peptides can also be used to raise antibodies, cc which have a variety of potential uses. For example, they can be used as to passively immunise animals against dust mite thypersensitivity, as positive controls in test kits and as tools to recover desired dust mite allergens from a mixture of proteins. (Updated con 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

The invention relates to an isolated mite allergenic protein of Dermatophagoides, designated Der HMW-map protein, and its related nucleic acid. The Der HMW-map protein is useful for eliciting an immune response against Der HMW-map protein. The protein or a reagent comprising a non-proteinaceous epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the detection of anti-Der HMW-map antibodies in animal fluids, and inhibition
                                                                                                                                                                                                                                                                                                                 Claim 12; Page 134-136; 161pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 21-MAR-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WC200222807-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Dermatophagoides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Der HMW-map polypeptide
                                                                                                                                                                                                                                                                                                                                                                                Der HMW-map

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           of immunoglobulin (19/6 or 100 disease. Antibodies that bind to Der HMW-map are user. The disease. Antibodies that bind to Der immunocomplex formation, thus binding of proteins to 19E, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccin against mite allergen hypersensitivity. Sequences AAU96314-AAU96342 represent Der HMW-map polypeptides of the invention
                                                                                           The invention relates to an isolated mite allergenic protein of Dermatophagoides, designated Der HMW-map protein, and its related nucleic acid. The Der HMW-map protein is useful for eliciting an immune response against Der HMW-map protein. The protein or a reagent comprising a non-proteinaceous epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the detection of anti-Der HMW-map antibodies in animal fluids, and inhibition of immunoglobulin (Ig)E or Der HMW-map protein activity associated with a disease. Antibodies that bind to Der HMW-map are useful for inhibiting brides.
                          disease. Antibodies that bind to Der HMM-map are useful for inhibiting binding of proteins to IgE, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity.                                                                                                                                                                                                                                                                                                               The present invention relates to isolated protein allergens from the Blomia tropicalis mitc, designated Blot 3 and Blot 12(8). The protein allergens are useful for preventing, reducing or ameliorating a B. tropicalis hypersensitivity condition, such as asthma, atopic dermatitis or rhinitis. The present sequence is a protein described in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New protein allergens from the mite Blomia tropicalis, useful as vaccine for preventing, reducing or ameliorating a B. tropicalis hypersensitivity or allergic conditions, e.g. asthma, atopic dermatitis or rhinitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Mite; allergen; Blot 3; Blot 12(S); Blot 12; dust mite; immunisation; antiallergic; anti-inflammatory; immunomodulatory; storage mite; asthma; atopic dermatitis; rhinitis; gene therapy; vaccine.
